Profile

A senior full stack engineer and DevOps specialist with 20+ years of experience, including product and business analysis. Proven track record delivering scalable, secure platforms for clients in financial services, government, and telecoms. Recently led development of a desktop blockchain utility (ChainVault) for RDA — an Electron + React + TypeScript application for interacting with Ethereum and Layer 2 networks, supporting NFT minting (ERC-721), file hash certification, multi-network configuration, audit logging, and local persistence. Technical expertise spans Python, Java, Kotlin, TypeScript, Corda, Rust, and Solidity, with cloud-native deployments on AWS, GCP, and Azure. Deep understanding of regulatory requirements, security, and performance critical to financial systems.

Education

BSc Bournemouth University, Business Information Technology Bournemouth, UK
 • Sponsored by Panasonic Sept 1995 – July 1999

Skills

Programming: Proficient with **Python, Kotlin, Java, C, TypeScript, JavaScript, Rust, C#** and **SQL**
Frameworks / Frontend: React, Electron, React Native (Expo), Next.js, FastAPI, Django, Flask, Corda, Dagster, Springboot, Firebase
DevOps: Docker, Kubernetes, AWS, Azure, GCP, Git, GitHub Actions, GitLab, Jenkins, Buildkite
Frontend / Desktop: Electron, Node.js, TypeScript, React
Blockchain / Web3: Solidity, ethers.js, web3.js, Hardhat, OpenZeppelin, ERC-721
Blockchain: Corda, Ethereum, Hyperledger
Databases: Postgres, MySQL, MongoDB, DynamoDB, Firestore
Tools: Lucidchart, Balsmiq, Linear, Jira
Languages: English (native)

Portfolio

ChainVault — Blockchain Utility Desktop Application (RDA) Remote
 Lead engineer for a desktop application enabling Ethereum and Layer-2 interactions, NFT minting and certificate verification, and secure audit trails. Aug 2025 – present

- Built an Electron + React + TypeScript desktop app with drag-and-drop file upload, file hash generation and local persistence.
- Implemented ERC-721 NFT minting and metadata management using Solidity, OpenZeppelin, and ethers.js with multi-network support.
- Designed a blockchain adapter layer (JSON-RPC clients, endpoint selector) supporting managed and self-hosted node strategies.
- Integrated OIDC/OAuth2 authentication, audit logging, telemetry and local repository abstractions for offline-first workflows.

Jefferies Bank London, UK
 Senior DevOps Engineer supporting front-office and core systems migration May 2025 – July 2025

- Spearheaded migration of over 200 code repositories into GitHub Enterprise, ensuring traceability and compliance with internal controls.
- Designed and implemented reusable GitHub Actions pipelines for build, test, and deploy workflows across Python and Java codebases.

- Collaborated with InfoSec to integrate static code analysis and secrets scanning in CI/CD.

Commodities Intelligence AI Data Platform (Armakuni)

Full stack engineer for data analytics platform providing commodity pricing intelligence to government and private clients in the Gulf region.

- Leveraged Dagster and Kubernetes to orchestrate secure pipelines ingesting global economic data.
- Technologies: Python, C#, TypeScript, Docker, Azure, Postgres.

London, UK

Nov 2024 – Apr 2025

Auth0/AWS Cognito Embedded Single Sign-On

Federated identity solution for embedding Sage product

- Developed federated identity solution for embedding Sage product.

Brighton, UK

2022 – 2023

Telco Roaming Reconciliation (BCE) Platform

Delivered blockchain-based data reconciliation platform inspired by financial clearing models.

- Used Corda to provide verifiable, auditable settlements between roaming partners, ensuring transparency and fraud resistance.
- Built mobile app to support multi-stakeholder authentication and record review.

London, UK

Secure Contacts Application (Harper Collins)

- Developed secure author contacts database using React, FastAPI, and MongoDB.

London, UK

2021 – 2022

Identity Management Layer (NCSC CyberFirst)

- Developed identity management platform using React, Python, and AWS Cognito.

London, UK

2020 – 2021

Experience

ChainVault (RDA), Lead Engineer

Lead engineer for a desktop blockchain utility enabling Ethereum and Layer-2 interactions, NFT minting, and secure audit trails.

- Built an Electron + React + TypeScript desktop app with drag-and-drop file upload, file-hash generation, and local persistence.
- Implemented ERC-721 NFT minting using Solidity, OpenZeppelin, and ethers.js with multi-network support.
- Designed a blockchain adapter layer (JSON-RPC clients, endpoint selector) and integrated OIDC/OAuth2 authentication, telemetry, and audit logging.

Remote

Aug 2025 – present

Jefferies Bank, Senior DevOps Engineer

Senior DevOps Engineer supporting GitHub Enterprise transformation and CI/CD modernisation. Enabling regulatory compliance, DevSecOps integration, and build standardisation across financial software estates.

- Github Actions, Python, Java, Docker, Kubernetes, AWS, Postgres

London, UK

Mar 2025 – July 2025

Armakuni, Senior Software Engineer

Fullstack developer for an AI commodities intelligence data platform for the UAE.

- Dagster, Python, C#, JavaScript, Docker, Kubernetes, Azure, Postgres

London, UK

Nov 2024 – Mar 2025

Vodafone, Solution Architect

- Led development for blockchain-based data reconciliation platform.
- Technologies: React, Python, Kotlin, JavaScript, Docker, Kubernetes, GCP
- Migrated from Azure to AWS and then to GCP over the lifetime of this project on the client's request

London, UK

2022 – 2024

Sage, Senior Software Engineer

- Developed secure single sign-on embedded capability.
- Technologies: React, Python, FastAPI, Django, Postgres, AWS Cognito

Brighton, UK

2022 – 2023

Harper Collins, Senior Software Engineer

- Developed a secure author contacts database.

London, UK

2021 – 2022

- Technologies: React, Python, FastAPI, MongoDB, OAuth 2.0, OpenID Connect, Docker

Zaizi Ltd, Senior Software Engineer

London, UK

- Led development for identity management software for NCSC CyberFirst.
- Technologies: React, Python, Flask, AWS Cognito, MySQL, DynamoDB, Lambda

2020 – 2021

Fifth9 Ltd, Senior Consultant - Full Stack Developer

London, UK

- Developed blockchain projects and consulted for telco and GDPR teams.
- Technologies: React, Python, Kotlin, Java, AWS, Docker, Kubernetes

2017 – 2020

Vodafone, IoT Business Analyst

Newbury, Berkshire, UK

- Managed business requirements for Vodafone's IoT product portfolio.

2013 – 2017

Nokia, Product Owner

Farnborough, UK

- Managed the Social Phonebook software product and led technical discussions with Facebook and Twitter.

2009 – 2011

Nokia, Nokia S40 Camera Software Team Leader

Farnborough, UK

- Led a team responsible for camera software driver development.

2008 – 2009

Nokia, Embedded Software Engineer

Farnborough, UK

- Developed embedded software for the IrDA protocol stack and S40 camera systems.

2003 – 2008

Panasonic, Embedded Software Engineer

Thatcham, Berkshire, UK

- Developed LLC layer for the GPRS protocol stack.

1999 – 2003
